DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 18-24 and 60 are rejected under 35 U.S.C. 102(b) as being anticipated by Kudla (U.S. 5,203,653).

Kudla discloses in figs. 1-4, a method of cutting, including: slicing into tissue with a helical knife or reamer (see col. 2, lines 42-46) to draw tissue proximally toward a sharp cutting edge (at R3 fig. 3b), where the helical knife or reamer has a slicing edge that extending through an opening (occurs at a trailing edge 16) at least partially bounded by the sharp cutting edge, where a slicing action between the cutting head portion (12) and each of the helical slots or grooves (14) would inherently take place by cutting the tissue with the sharp cutting edge. As to claims 20-24, providing the helical knife on an inner member or drive shaft (not shown) and the sharp cutting edge on an outer member (32).

Claims 18-24,25-43,45-60 are rejected under 35 U.S.C. 102(b) as being anticipated by Banko (U.S. 3,732,858).

Banko discloses in figs. 10,12, col. 3, lines 64-67, col. 4, lines 5-10 and lines 23-31, a surgical cutting instrument having the limitations of the above listed claims, including: a cutting instrument comprises an outer member (52b) has an opening (at the tip of passage means 40b)

bounded by a sharp cutting edge (the sharp cutting edge is considered at the tip of segment 78b), where a helical knife (130) coupled to the outer member for rotation relative to the outer member. The helical knife (130) would inherently has an edge to slide into tissue to draw the tissue proximally along the helical knife towards the sharp cutting edge. Further, it is noted that fig. 10 of Banko can be clearly defined an inner member (42b) including a shaft having a helical knife (130) with a v-shaped (v-shaped is considered from the left end of helical knife 130b to the right end of segment 130b) that defined a sharp, slicing edge.

Regarding claims 26-27, wherein the edge of helical knife (130) extends distally through the opening; and where the cutting edge and the edge of helical knife configure to cut tissue.

Regarding claims 33-34 and 50-51, where the device further includes a hub (68), where the outer member (52b) defines a fluid. The cutting edge is located at a distal end of the outer member. The outer member tapers to the cutting edge (fig. 10).

Regarding claims 18-24 and 60, Banko is capable of performing the method steps as claimed in figs. 10,12, col. 3, lines 64-67, col. 4, lines 5-10 and lines 23-31.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 44 is rejected under 35 U.S.C. 103(a) as being unpatentable over Banko (U.S. 3,732,858).

Banko discloses the invention substantially as claimed. Although, Banko does not disclose the inner member and the outer member is in the range of about 0.0005 to 0.002 inches. It would have been obvious matter of design choice to modify the inner member and the outer member is in the range of about 0.0005 to 0.002 inches, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re-Aller, 105 USPQ 233.

Response to Amendment

3. Applicant's arguments with respect to claims 18, 25, 42 and 59-60 have been considered but they are not persuasive. Applicant is asked to please refer to the modified prior art rejection above wherein examiner addresses applicant's concerns regarding prior art rejections.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
